With the QAD Enterprise Platform, purpose-built advanced technology is embedded to provide non-invasive adoption. Technology adoption across QAD's manufacturing base reduces individual customer risks and costs. Advanced technologies added to QAD Adaptive ERP may be utilized by all applications via the QAD Enterprise Platform.

A train of voltage pulses can be used for time-domain spectroscopy of quantum-coherent structures, as shown by Christian Flindt and co-workers in article number 1900014. When single-electron excitations are periodically injected into a mesoscopic circuit, the distribution of waiting times between the outgoing charges contains detailed information about the characteristic timescales of the device.
