The superposition principle, also known as superposition property, states that, for all linear systems, the net response caused by two or more stimuli is the sum of the responses that would have been caused by each stimulus individually. So that if input A produces response X and input B produces response Y then input (A + B) produces response (X + Y).. A function that satisfies the ...

In , w_0 (τ_1) is the time response of the system to a unit impulse applied at time 0 and w_2 (τ_1) is the time response of the system to an impulse of twice unit magnitude at time 0. These response functions represent the memory of the system. If the system is linear, then $w_2 = 2w_0$ and $h_1 = w_0$, which is why the first-order kernel is referred to as the linear unit impulse response.
