Temperature Unit. Okolab Cage Incubator employs a Temperature Unit that generates warm air to raise the temperature inside the enclosure. Superior accuracy is guaranteed by the interplay of four sensors: three for temperature and one for flow rate.

Switch Debouncing. Switch debouncing is one of those things you generally have to live with when playing with switches and digital circuits. If you want to input a manual switch signal into a digital circuit you'll need to debounce the signal so a single press doesn't appear like multiple presses.

Learn how to design digital power supplies and PFCs from ground up quickly and easily with this in-depth laboratory based design workshop. During the workshop you will learn how to design stable analog and digital control loops in both voltage mode and current mode. You will then design, code, implement and test several digital power supplies in our well-equipped laboratory.
