Floodplain harvesting is when the water that flows across the floodplains during a flood is collected and used later. Overland flow refers to water that runs across the land after rainfall, flooding, or after it rises to the surface naturally from underground. Capturing this water on a floodplain is referred to as overland flow development or floodplain harvesting.

The High and Low Tide Composites (HLTC) are imagery mosaics developed to visualise Australia's coasts, estuaries and reefs at low and high tide, whilst removing the influence of noise features

such as clouds, breaking water and sun-glint 2. These products are highly interpretable, and provide a valuable snapshot of the coastline at different biophysical states.
