Energy Transfer. Heat Insulation for Buildings.. What is Double Glazing?. Double glazing involves two layers of glass with a small air gap between them.. How does Double Glazing Work?. Double Glazing works as an insulator in much the same way as cavity wall and loft insulation.. The air gap is too small to allow the air to circulate. This prevents heat transfer by convection.

Benefits of Triple Glazing. The key benefits are really to do with comfort. If you insulate the walls,

roof and floor of a house, and you ignore the glazing, you end up with cold spots surrounding the windows at night, which cause draughts, draw heat away from you if you sit next to them, and result in streams of condensation running down the panes.
