### **Nuclear Energy Fourth Edition**

Nuclear power is a major source of energy in France, with a 40% share of energy consumption in 2015. Nuclear power is the largest source of electricity in the country, with a generation of 379.1 TWh, or 71.6% of the country's total production of 519.4 TWh, the highest percentage in the world.. Électricité de France (EDF) - the country's main electricity generation and distribution company ...

### **Nuclear power in France - Wikipedia**

A nuclear weapon (also called an atom bomb, nuke, atomic bomb, nuclear warhead, A-bomb, or nuclear bomb) is an explosive device that derives its destructive force from nuclear reactions, either fission (fission bomb) or from a combination of fission and fusion reactions (thermonuclear bomb). Both bomb types release large quantities of energy from relatively small amounts of matter.

When solar energy drives the dissociation of CO<sub>2</sub> and H<sub>2</sub>O, the fuel cycle is comparable to that of biofuels: synthetic "trees" collect CO<sub>2</sub> from the air and use solar energy to fix it as carbon (.). However, this fuel cycle avoids the biomass intermediate product, which consumes a lot of resources to cultivate (water, fertilizer, etc) and needs to be processed further to produce a fuel.

The price of Natural Gas delivered via long-term contracts as Liquefied Natural Gas (LNG) is typically around \$6 per MCF. Within the USA, Natural Gas prices had been extremely volatile over the past few years as production had not been able to keep pace with demand. However of March, 2009 the price has fallen to below \$4.00 per thousand Cubic Feet (MCF).
