### **Practical Electronics For Inventors By**

Worldwide utility patents. Inventors with 200 or more worldwide utility patents are shown in the following table. While in many cases this is the number of utility patents granted by the United States Patent and Trademark Office, it may include utility patents granted by other countries, as noted by the source references for an inventor.

AirBorn Electronics design (and make \*) Printed Circuit Boards (PCBs) that monitor and control things. Our business is making the circuit boards that go inside new Australian designed products. AirBorn doesn't actually make and sell the whole product - we just design the PCB and software - the electronics and microprocessor "smarts" inside the product.

Introduction: The LED is a light source which uses semiconductors and electroluminescence to create light. There are two major kinds of light emitting diodes: LED and OLED.The LED is different than EL lamp in that it uses a small semiconductor crystal with reflectors and other parts to make the light brighter and focused into a single point.

The Story: Probably no means of communication has revolutionized the daily lives of ordinary people more than the telephone. Simply described, it is a system which converts sound, specifically the human voice, to electrical impulses of various frequencies and then back to a tone that sounds like the original voice.
