The following is a list of the most cited articles based on citations published in the last three years, according to CrossRef.

**Transfusion Medicine - Wiley Online Library**

Transfusion Medicine. Blood transfusion is a medical therapy that can be life-saving. As with any treatment, however, transfusion of blood or blood components must be ordered and administered safely and appropriately. Transfusion is more than a single discrete event—it is a process. The transfusion chain begins with donor considerations...

**Transfusion Medicine - AABB**

Transfusion medicine (or transfusiology) is the branch of medicine that is concerned with transfusion of blood and blood components. It encompasses issues of blood donation, immunohematology and other laboratory testing, transfusion practices, patient blood management, therapeutic apheresis, stem cell collections, cellular therapy, and coagulation. Laboratory management and understanding of state and federal regulations related to blood products are also a large part of the field.
